

## **Dashboard created using Tableau**

### **Design choices:**

1. The bar chart was the best way to display the amount of sugar and calories that were in the cereals.
2. I sorted it so it went in ascending order.
3. I created a filter on both sheets so only the top 30 highest cereals (highest amount of sugar and calories) would appear in the dashboard.
4. The color choice was also crucial - I went with a sunrise effect where the more sugar and calories a cereal contained the more red it appeared.
5. The insight I gained from the dashboard was that cereals with the highest amount of sugar were not necessarily the ones with the most amount of calories.
